

TOOTH AND GUM ACRYLIC THEATRICAL TEETH APPLIANCE KIT

Description: For those looking to make their own goo and slime recipes, here is an excellent Methylcellulose powder that dissolves well into warm or hot water. This is one of the highest molecular weight powders available and is capable of creating very thick solutions if required, depending on the powder to water ratio used.

PRODUCT FEATURES

Higher molecular weight also means greater value as less powder is needed to achieve gels of any concentration. This is an excellent product for simulating nearly any type of bodily fluid. Solutions are clear and can be tinted to any shade or color with food or water based colorants.

MIXING INSTRUCTIONS

Dissolve with high shear agitation in hot water for best dispersion of the powder. Any concentration of thickened fluid can be created depending on the amount of powder that is added to a given amount of water. For example, 3 oz. of powder to one quart of water will give a KY jelly consistency.

The safety data sheet (SDS) for this or any Monster Makers product should be read before using and is available on request. All Monster Makers products are safe to use if directions are read and followed carefully. **Keep Out of Reach of Children.**
