

SOFT POLYFOAM

SOFT EXPANDING POLYURETHANE FOAM

Description: A 2 part, 2lb. waterblown polyurethane foam system that works beautifully for props, displays, and simulated body parts. Compares favorably to the popular polysoft compound.

PRODUCT FEATURES

Because this product is not self-skinning, we recommend using it to back layers of latex in a gypsum mold. This enables you to turn your own masks into soft, but solid objects that will hold their shape. The expansion ratio of up to 35 to 1 makes it very cost effective. Kits are packaged in 2 parts B to 1 part A: 2 pounds of B to 1 pound of A for example.

For best results, use of a scale to measure by weight is recommended. This product is also moisture sensitive. When used to back latex, please make sure the casting is bone dry before introducing the foam or the foam may fail to set.

The safety data sheet (SDS) for this or any Monster Makers product should be read before using and is available on request. All Monster Makers products are safe to use if directions are read and followed carefully. **Keep Out of Reach of Children.**
